About

A smart bench presented in a wide range of options shows that advanced modern design does not always mean high price. Durability and steadiness go hand in hand with pure lines and remarkable lightness. The simply shaped table and park chairs enable you to create original combinations in public and private environments.

Galvanized steel structure coated with powder paint finish. Seat and backrest made of steel round grid, stainless steel grid or solid wooden lamellas which are joined in a concealed but firm way to the supporting frame. All four legs can be easily anchored to the ground.

← BACKREST, ARMREST

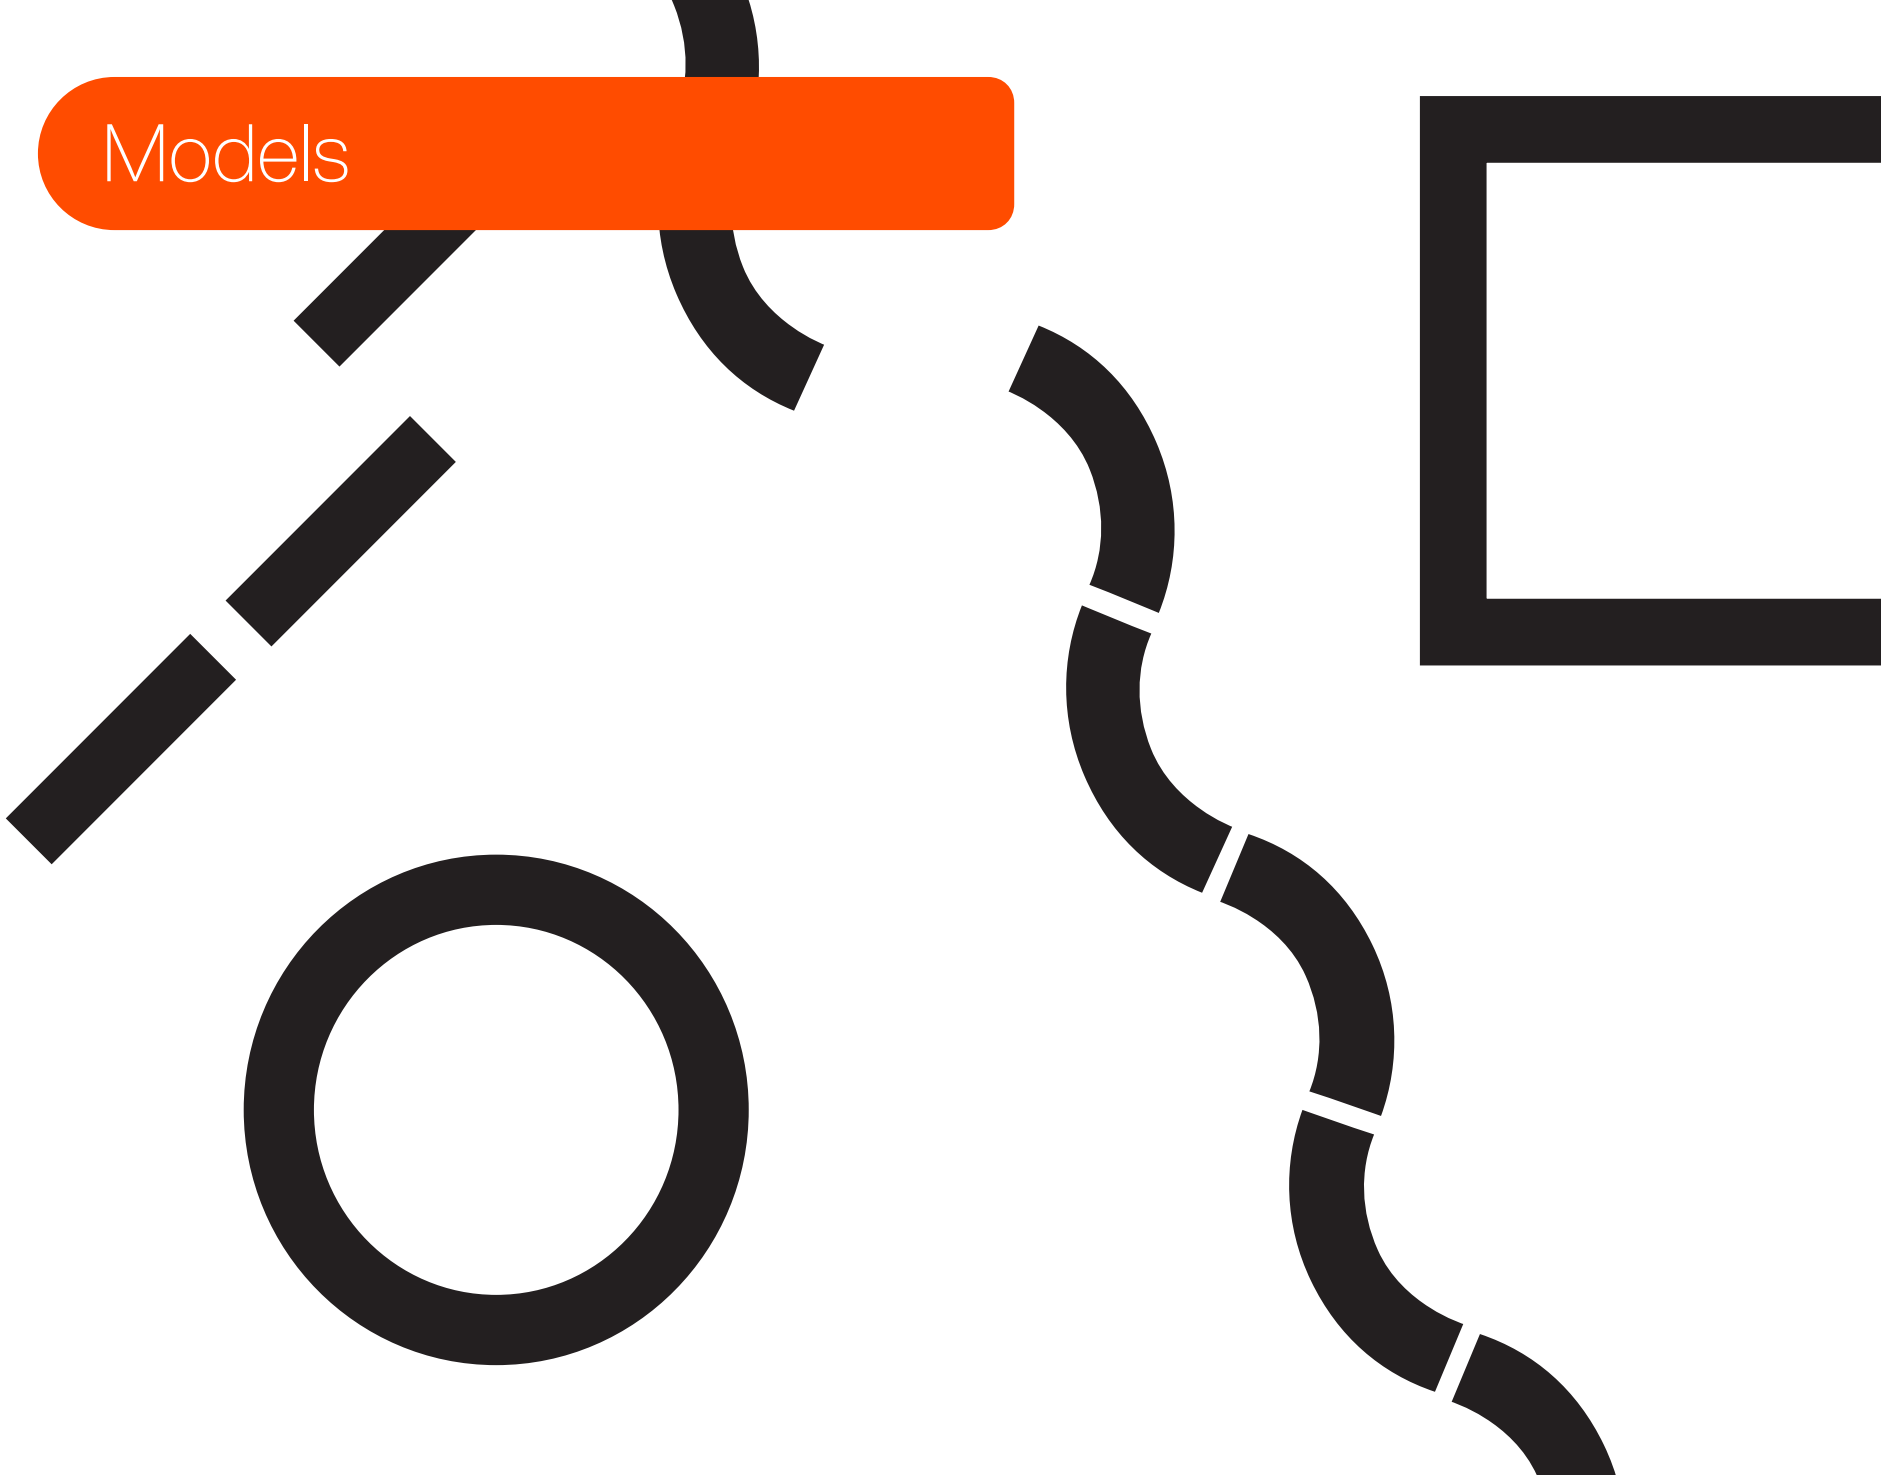

About

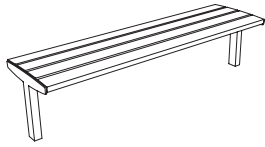

The all-purpose modular kit based on design of vera range is intended for all types of public realms, particularly those where an easy access from both sides and low maintenance are required. It is perfect not only for stations, airports, and bus terminals, but these advantageous features can also complement frequented squares or busy streets. A real bonus is the wider seat and less legs that highlight the silhouette of the bench. Apart from the standard length, double version and the modular kit enabling continuous never-ending lines are offered as well. Curved versions can result in circle, installed for instance around a tree, or combined so that ellipse is achieved.

Zinc and powder coated steel structure. Seat and backrest made of solid wooden boards or steel/stainless steel rounds, without visible joints to steel structure.

original shapes in landscape

Highlights

● curved version

It is possible to assemble a circle or combine it into an ellipse and install it for instance around a tree.

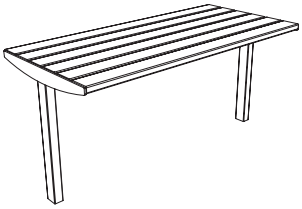

● central leg

Clean and calm shape silhouette achieved by broader seat and limited number of legs

● standard length

We also offer a double length and a modular kit enabling to create different shapes and lengths

← SINGLE SEATS

About

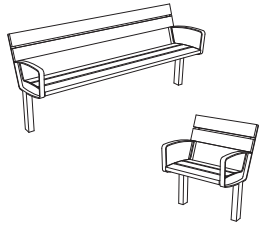

Series of optically light benches placed on a pair of legs in the longitudinal axis. Subtle yet sufficiently durable construction carries the solid wooden lamellas or frames of steel or stainless steel round bars on the seat and the backrest. Bench can stand independently or can be combined in an endless line of an elegant seating element. A limited number of legs does not only convey elegance but also enables easy installation and effortless maintenance of the areas under the bench. We also offer a hexagonal composition to be used separately or installed around a tall tree or a pole.

Galvanized steel structure coated with powder paint finish, solid wooden lamellas or frames with galvanized steel or stainless steel round bars. Anchoring under the pavement.
